

ALL-IRELAND POLLINATOR PLAN

Juanita Browne
Project officer

We want to express our enormous thanks to those people across all sectors who have been championing the All-Ireland Pollinator Plan

WHY IS POLLINATION IMPORTANT?

**Economy
& Wealth**

Health &
Wellbeing

Wildlife &
Landscape

**€53million/
annum**

In Ireland within the last ten years the value of soft fruit, field vegetable, and apple production has increased by 17, 21 and 24% respectively

Economy
& Wealth

Health & Wellbeing

Wildlife & Landscape

100 crops provide

90% of the
world's food
71 are pollinated by bees

*Without pollinators it would
be extremely difficult to have
a healthy balanced diet*

**We need pollinators if we want to grow our own
fruit and vegetables**

Jan Feb March April May June July Aug Sept Oct Nov Dec

Economy
& Wealth

Health &
Wellbeing

Wildlife & Landscape

78% of our wild plants benefit
from being pollinated by insects

Economy
& Wealth

Health &
Wellbeing

Wildlife & Landscape

**Protecting pollinators protects the
whole environment**

- ✓ Benefits tourism
- ✓ Helps create our 'green image' which is a point of differentiation across international markets for our exports

**Bees provide a simple vehicle that can be
used to sell a wider biodiversity message**

Without pollinators we'd have less diversity on our dinner plates and less colour in the countryside

WHO ARE THE POLLINATORS IN IRELAND?

Most pollination of crops and wild plants is carried out by bees

The rest is provided by various other flower visiting insects, particularly flies

BEES IN IRELAND

Ireland has **99** bee species:

Honeybee

Bumblebees

Solitary bees

WILD POLLINATORS

POLLINATION SERVICE CANNOT BE PROVIDED BY HONEYBEES ALONE

UK - if all honeybee hives were used for crop pollination, they could only provide about **one third** of the service required by crops. The rest is provided free of charge by wild pollinators.

The economic contribution of pollination by wild bees was recently assessed as £1,800 or €2,400 per hectare.

To maintain pollination you need healthy honeybees in combination with a diversity and abundance of wild bees and other insect pollinators

BUMBLEBEES – 21 DIFFERENT TYPES IN IRELAND

BUMBLEBEES - LIFECYCLE

Food source

Nest site

Feeds & finds a nest

Queen emerges from hibernation in early spring

Prepares a pollen loaf and a nectar pot and starts laying eggs fertilised with sperm stored from previous year

Hibernation site

Mated new queen feeds to build up reserves before hibernation. Workers, males and old queen die

Food source

New queens and males leave the nest to find mates

In mid-late summer the queen lays unfertilised eggs which will become males. She also allows some new queens to develop

Female workers emerge and take over nest duties

Queen remains in the nest laying eggs

Food source

BUMBLEBEES NEED FOOD SOURCES THROUGHOUT THE YEAR

EARLY SPRING: queens are establishing nests

In the early days of the nest it is estimated that a *Bombus terrestris* queen may have to visit as many as 6000 flowers/day to get enough nectar to maintain the heat needed to brood her eggs

SPRING – SUMMER: nests are growing, workers are active

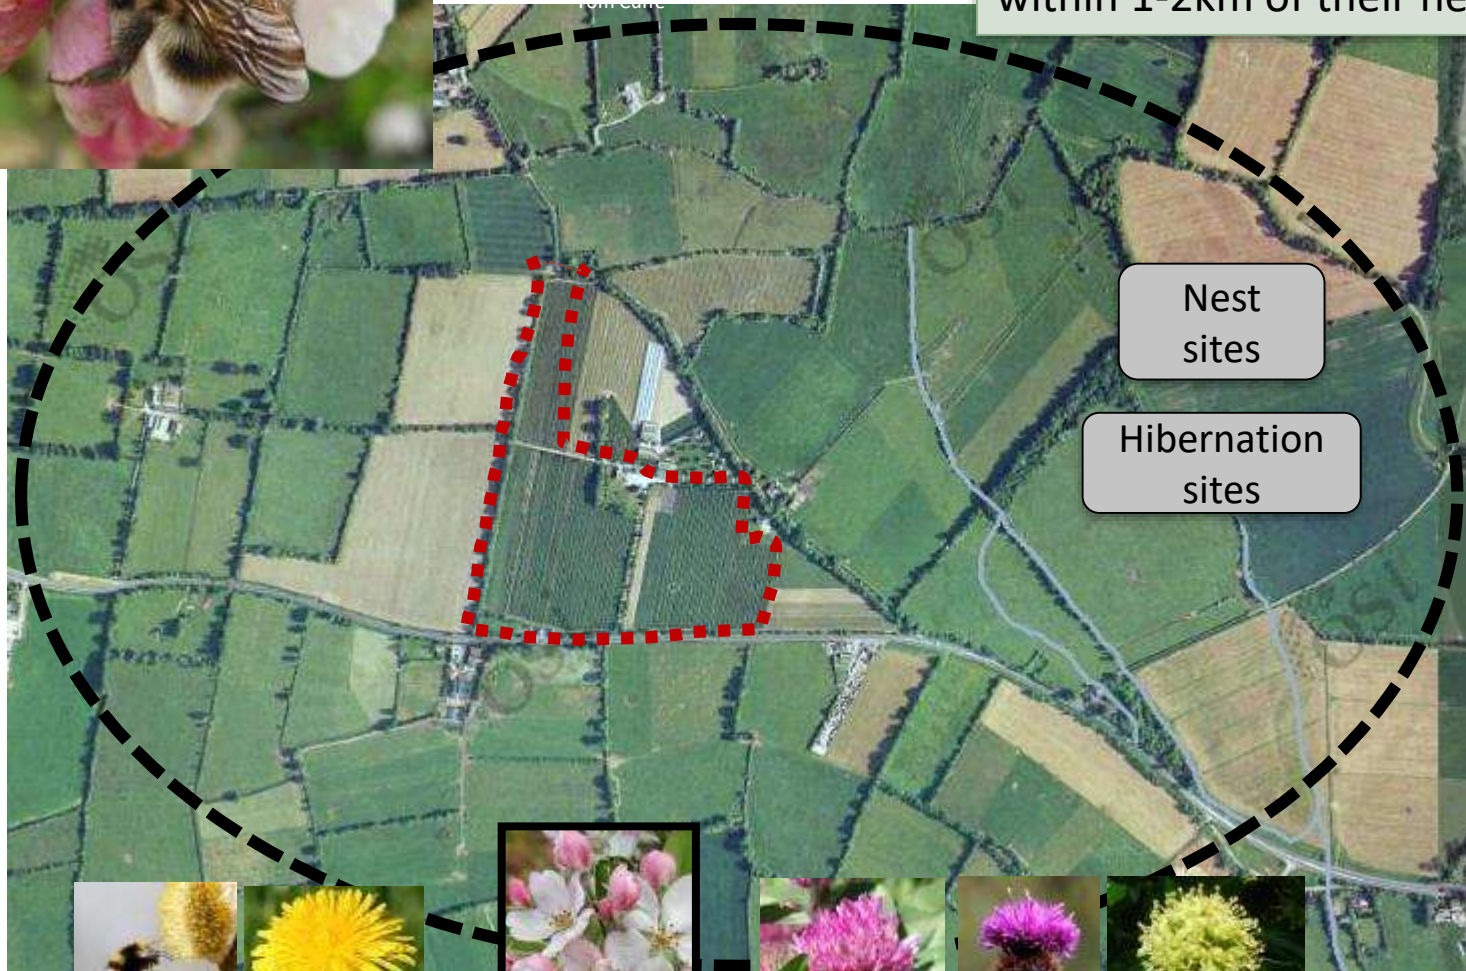

AUTUMN: queens are fattening up ready for hibernation

Bombus terrestris queens need to weigh at least 0.6 g to successfully hibernate and emerge next spring.

Bumblebees can travel up to 5km but commonly forage within 1-2km of their nest

Jan Feb March April May June July Aug Sept Oct Nov Dec

SOLITARY BEES – 77 DIFFERENT TYPES IN IRELAND

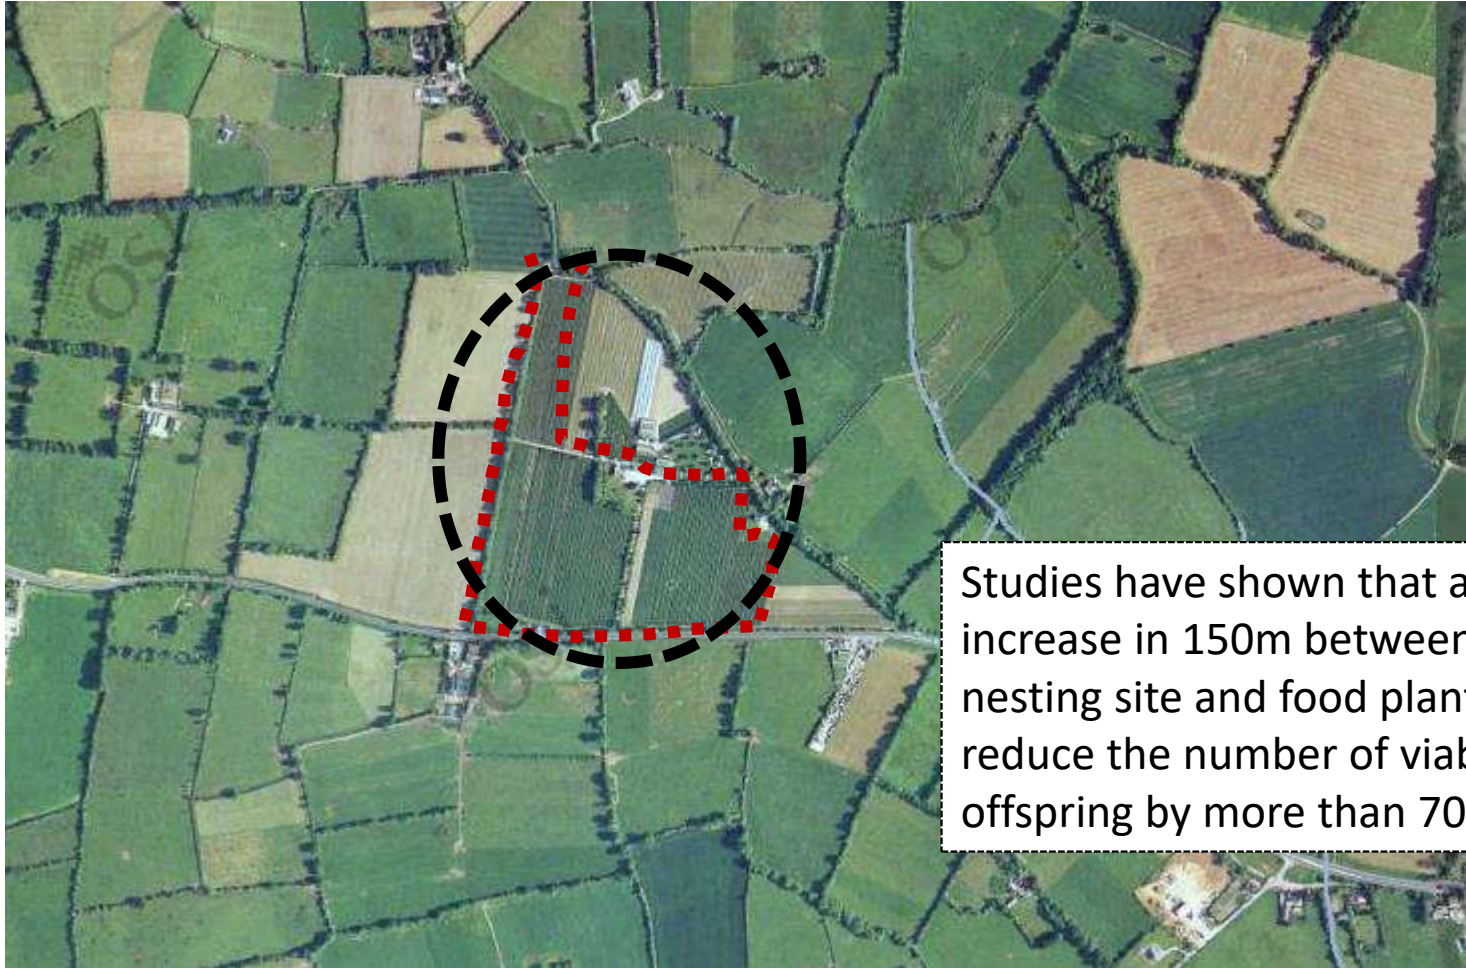

SOLITARY BEES - LIFECYCLE

Solitary bees can travel up to 1km but commonly forage within 100-200m of their nest

Studies have shown that an increase in 150m between the nesting site and food plants can reduce the number of viable offspring by more than 70%

WHERE DO SOLITARY BEES NEST?

62 species (**80%**) are mining bees who nest in bare ground or south/east facing banks of bare earth (soil, sand, clay, peat)

15 species are cavity nesting bees who nest in south facing stone walls, masonry wooden structures or commercially available nest boxes

ARE POLLINATORS DECLINING IN IRELAND?

More than half of Ireland's bee species have undergone substantial declines in their numbers since 1980.

Two species have become extinct

One third of our 98 wild bee species are threatened with extinction from Ireland

6 species are critically endangered,
10 endangered
14 vulnerable

WHY ARE POLLINATORS DECLINING?

Bees are declining because we've drastically reduced the areas where they can nest and the amount of food our landscape provides for them.

We've also inadvertently introduced pests and diseases that negatively impact their health, and we subject them to levels of pesticides that make it difficult for them to complete their life cycles.

HABITAT LOSS: **HOMELESSNESS**

GENERAL DECLINE IN WILDFLOWERS: **HUNGER**

PESTS AND DISEASE: **SICKNESS**

PESTICIDES: **POISONING**

CLIMATE CHANGE: **CHANGING ENVIRONMENT**

WHAT CAN WE DO?

HABITAT LOSS: **HOMELESSNESS**

GENERAL DECLINE IN WILDFLOWERS: **HUNGER**

PESTS AND DISEASE: **SICKNESS**

AGROCHEMICALS: **POISONING**

CLIMATE CHANGE: **CHANGING ENVIRONMENT**

John Fogarty

1. Accept that pollination is important
2. Recognise there is a problem
3. Start to build a framework for positive action

- Published September 2015
- Developed by a 15 member steering group
- Included a consultation phase which involved both public & stakeholder engagement
- **90+** governmental and non-governmental organisations have agreed the shared Plan
- Identifies **81** actions to make Ireland pollinator friendly
- Developed without funding

www.pollinators.ie

All-Ireland Pollinator Plan 2015-2020

Creating an Ireland where pollinators can survive and thrive

**Raising awareness of
pollinators and how to
protect them**

11

**Managed pollinators –
supporting beekeepers
& growers**

7

MAKING IRELAND POLLINATOR FRIENDLY

*Provide food and shelter across all types of land
so that our pollinators can survive and thrive*

**Farmland
Public land
Private land**

42

**Expanding our knowledge
on pollinators and
pollination service**

11

**Collecting evidence to
track change and measure
success**

6

+ 4 general actions

Steering group oversees the implementation which is coordinated by the National Biodiversity Data Centre

Steering Group 2019

1. Úna FitzPatrick (chair) – Data Centre
2. Jane Stout (deputy chair) – TCD
3. Tomás Murray – Data Centre
4. Hannah Denniston– DAFM
5. Catherine Keena – Teagasc
6. Archie Murchie – Agri Food & Biosciences Institute
7. Ken Bradley – DAERA, policy
8. Melina Quinn – National Truct, NI
9. Brian Nelson – NPWS
10. Eimear Fox - Transport Infrastructure Ireland
11. Anne Murray- Local Authorities
12. Susie Hill - Ulster Beekeepers Association
13. Mary Montaut – Federation Irish Beekeepers
14. Damian McFerran - CEDaR
15. Veronica Santorum – Limerick's Buzzing
16. Catherine Bertrand - Butterfly Conservation

If you want to help implement the All-Ireland Pollinator Plan it is important to think about how your site can provide **food, shelter & safety** for pollinators

Your site could be any piece of land you have responsibility for e.g., park, roadside verge, local area, farm, school, campus, allotment, business property, OPW historic property, National Trust property, golf course, church, garden....

How your site can provide **food, shelter & safety** for pollinators

Bumblebees (20 species)

Long grass, base of hedgerow

Mining solitary bees (62 species)

Bare ground, south/east facing banks

Cavity nesting solitary bees (15 species)

Hollow stems, holes in wood, bee nest boxes

Eliminate or reduce the use of pesticides

Spring → Autumn

Willow

Dandelion

Clover

Knapweed

Bramble

Ivy

Native plants

Flowering
hedgerows

Hawthorn
Willow
Wild Cherry
Crab Apple
Bramble
Ivy

Grassy
verges/banks

Wild Carrot
Goldenrod
Hogweed
Mignonette
Rosebay willowherb
Stachys

Meadows or areas
of long grass

Bird's foot trefoil
Knapweed
Scabious
Senecio
Thistle
Vetch
Achillea
Wild marjoram
Vetchling

Edges of tracks
that are not
sprayed

Dead-nettle
Forget-me-not
Geranium sp
Hawksbeard
Veronica

Wilder corners
that are not
sprayed

Bluebell
Brassica
Butterbur
Coltsfoot
Foxglove
Radish
Turnip
Fleabane
Red bartsia

Good for all bees, or particularly important for honeybees, bumblebees or solitary bees

Deliberate planting

Trees/shrubs

- Horse chestnut
- Lime
- Firethorn
- Berberis

Schools

Councils

Religious
properties

Gardens

By providing more food, shelter and safety in our towns and villages, along our transport routes and in farmland we can create an Ireland where pollinators can survive and thrive

Publishing evidence based actions on how you can help

How to provide food, shelter and safety for pollinators

- ✓ Actions are all evidence based
- ✓ Relevant sectors feed into development
- ✓ Communication is tailored each time

Action 3:
Create a short flowering '6-week meadow'
 Identify areas of grass that could be cut on a 6-weekly rotation to allow Clovers and Bird's-foot-trefoil to flower. This will provide food for pollinators where shortly mown grass does not. Such areas could be beside areas of shortly mown grass, a path or a meadow.

Action 4:
Let the Dandelions bloom!
 Identify areas that will be mown under existing regimes, but aim to carry out the first grass cut of the year in April after the first flush of Dandelions, but before they set seed. Dandelions are a vital food source for bees in spring.

Pollinator friendly planting

Traditionally, a lot of deliberate planting in public spaces has been with annuals such as Begonia, Primula or Busy Lizzie. Unfortunately these are not good sources of pollen or nectar (as they have been bred to be very 'showy') and do not provide food for bees and other insects. There are many other plants that can look similarly attractive but will also support our pollinators.

Areas where these actions might apply in a local community are: community gardens, roundabouts, road verges, parks or squares, housing estates, areas surrounding sports pitches, schools, car parks, shopping centres etc.

Action 5:
Clover lawn
 Identify small areas where grass could be entirely replaced with a permanent clover mix. Red and white clovers will provide colour, and are a very important food source for bees.

Action 6:
Flowering trees and shrubs
 Incorporate a mix of pollinator friendly trees and shrubs into the local community that will flower throughout the season (list in appendix). An orchard can be a wonderful addition for pollinators and the community.

Action 7:
Perennial flowers for pollinators
 Incorporate pollinator friendly perennial plants into the local community to provide food for pollinators from spring through to autumn (list in appendix).

Action 8:
Annual flowers for pollinators
 Work with local authorities to ensure a component of annual planting in parks is with pollinator friendly annual plants - single rather than double flowered varieties (list in appendix).

Action 9:
Pollinator friendly urban planters
 Identify some urban planters or hanging baskets where the standard annual bedding mix could be replaced by perennial pollinator friendly plants (list in appendix).

Action 10:
Pollinator friendly roundabouts
 Work with local authorities to identify some roundabouts that could be planted in a pollinator friendly way e.g., bulbs (Crocus, Alliums) or pollinator friendly perennial plants in centre.

Action 11:
Plant a native wildflower meadow
 Identify areas where it may be possible to create a native wildflower meadow using commercially purchased seed. This would be more flower-rich than the meadow in Action 2 but it is also more costly and requires careful planning and management. Please be aware that **most sites will be unsuited to the immediate wildflower meadow due to high mowing** (and therefore...)

Info Box:

All the flowers in our gardens are of the Island Waterways Association (IWA) and are registered at an arboretum. Many of our plants are also available for sale at our own pollinator friendly plant nursery.

- ✓ Pollinator friendly actions, each very clearly explained
- ✓ Lots of **options**
- ✓ All actions are pragmatic & low cost

www.pollinators.ie

A separate **How-to-guide series** provides additional information on more complex actions – developed in partnership with relevant organisations

2018 publications

We use **existing networks/partnerships** to encourage implementation and roll out within the sector – efficient, cost effective, beds down the actions within existing structures.

We use **existing networks/partnerships** to encourage implementation and roll out within the sector – efficient, cost effective, beds down the actions within existing structures.

We use **existing networks/partnerships** to encourage implementation and roll out within the sector – efficient, cost effective, beds down the actions within existing structures.

TRACKING CHANGE & MEASURING SUCCESS

The publication of the All-Ireland Pollinator Plan isn't a box-ticking exercise
– measuring success is a crucial part of the Plan

1. Track implementation of the 81 actions in the Plan

2. Track creation of pollinator habitat/resources

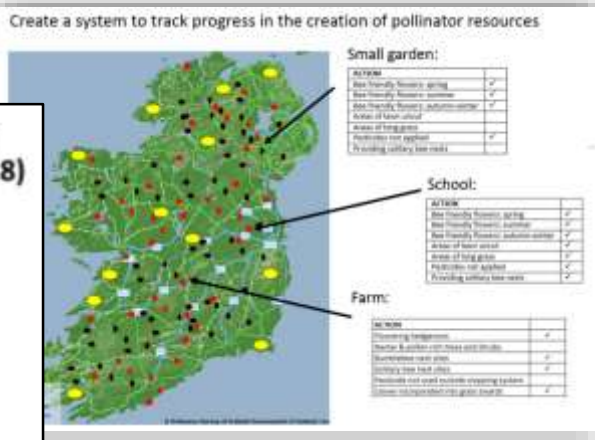

3. Track changes in pollinators within the landscape

Status and progress of the Pollinator Plan's original 81 actions at the end of year 3 (2018)

* Some actions not yet progressed are funding dependent

92%

Publicly available online mapping system
